Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

JERRY.SHORMA@HP.COM
mkraft@hp.com
ipa.mail@hp.com

Office Action Summary	Application No. 10/807,060	Applicant(s) MARON, JONATHAN	
	Examiner Johnese Johnson	Art Unit 2166	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 September 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Remarks

1. In response to the Appeal Brief filed on September 11, 2007, claims 1-20 are pending in this application.
2. The objections to the claims have been withdrawn.
3. The rejections to claims 10 and 17-20 under 35 USC 101 are maintained. To overcome the rejections, the claims should be amended to recite, "computer-readable storage medium".

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 10 and 17-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The content of claims 10 and 17 are directed to software modules which are small sections of program code/software per se. Program code is also known as functional descriptive material (See *In re Warmerdam*, 33 F3d at 1360, 31 USPQ2d at 1759). The content is not structurally and functionally interrelated to a computer-

readable medium thereby rendering it incapable of producing a useful, concrete and tangible result and is therefore, non- statutory. The claims should be amended to recite hardware in the body of the claims.

Claims 17-20 recite, "computer-readable medium that comprises executable instructions". According to Applicant's specification, paragraph [0027], lines 6-10, " The executable instructions or code may be obtained from a readable medium ... or communicated via a data signal from a communication medium". When nonfunctional descriptive material is recorded on some computer-readable medium, in a computer or on an electromagnetic carrier signal, it is not statutory since no requisite functionality is present to satisfy the practical application requirement. Merely claiming nonfunctional descriptive material, i.e., abstract ideas, stored in a computer-readable medium, in a computer, on an electromagnetic carrier signal does not make it statutory. The claims must be amended to recite, "computer-readable storage medium" to overcome the rejection.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Pace et al. (US. PG. Pub. No. 2003/0050932).

As to claim 1, Pace et al. disclose:

A method to provide a service in a controlled run-time environment,
comprising:

registering a proxy service in said controlled run-time environment wherein said proxy
service implements an interface defined according to said controlled run-time
environment (see paragraph [0700]; wherein the proxy is an EJD proxy)
configured to services operating in said controlled run-time environment to
interoperate with said proxy service (see paragraph [0768], lines 1-2; wherein the
controlled run-time environment is an
EJB container);
receiving service information by said proxy service from a local service executing in said
controlled run-time environment via an interface method of said proxy service
(see paragraph [0908], lines 4-9);
communicating said service information to a remote service from said proxy service
(see paragraph [0908], lines 4-9);
receiving processed information from said remote service in response to said
communicating (see paragraph [0908], lines 4-9); and
returning said processed information to said local service from said proxy service (see
paragraph [0908], lines 4-9).

As to claims 2 and 18, Pace et al. disclose:

wherein said proxy service is an object of a class that is instantiated by said controlled run-time environment (see paragraph [0053]).

As to claims 3 and 13, Pace et al. disclose:

wherein said controlled run-time environment means instantiates said object in a partition (see paragraph [0908], lines 4-9) and only permits services operating in said partition to access said proxy service (see paragraph [0440]; wherein EJBs extend the attributes of Java thereby delivering access security).

As to claim 4, Pace et al. disclose:

wherein said communicating service information comprises:
encapsulating said service information in an extensible mark-up language (XML) file (see [0317]; wherein information can be in the form of a java servlet and JSP and the JSP is in xml).

As to claims 5 and 14, Pace et al. disclose:

security management means for exposing said proxy service only when said security management means determines access is permitted according to security parameters (see paragraph [0398]; wherein EJBs extend the attributes of Java thereby delivering access security).

As to claim 6, Pace et al. disclose:

wherein said exposing comprises: determining user-level authorization from said security parameters (see paragraph [0322], lines 22-27; wherein the EJB container manages access of multiple users).

As to claim 7, Pace et al. disclose:

wherein said exposing comprises: determining process-level authorization from said security parameters (see paragraph [0067]; wherein the container manages control of transactions).

As to claims 8 and 15, Pace et al. disclose:

further comprising: creating a log of access to said remote service (see paragraph [0750]).

As to claims 9 and 16, Pace et al. disclose:

wherein said communicating said service information comprises: performing a remote procedure call (see paragraph [0477] – performs RMI) .

As to claim 10, Pace et al. disclose:

A system to provide a modular software service, comprising:

controlled run-time environment means for managing processes (see paragraph [0768],

lines 1-2; wherein the controlled run-time

environment is an EJB container);

service registry means for registering services operating in said controlled run-time

environment means, wherein at least one registered service is a proxy service

means (see paragraph [0700]; wherein the proxy is an EJD proxy);

said proxy service means (see paragraph [0700]; wherein the proxy is an EJD proxy)

implementing an interface defined according to said controlled run-time

environment means for enabling services operating in said controlled run-time

environment means to interoperate with said proxy service means, said proxy

service means comprising:

means for receiving service information by said proxy service means from

a local service executing in said controlled run-time environment means

(see paragraph [0908], lines 4-9);

means for communicating said service information to a remote service from said

proxy service means (see paragraph [0908], lines 4-9);

means for receiving processed information from said remote service in response

to said communicated service information (see paragraph [0908], lines 4-

9); and

means for returning said processed information to said local service (see

paragraph [0908], lines 4-9).

As to claims 11 and 19, Pace et al. disclose:

wherein said proxy service means further comprises:

means for verifying said service information that is operable before said means
for communicating (see paragraph [0121], lines 6-11, and paragraph [0190], lines 1-5).

As to claims 12 and 20, Pace et al. disclose:

wherein said proxy service means further comprises:

means for communicating with a distributed service registry to identify said
remote service (see paragraph [0477]).

As to claim 17, Pace et al. disclose:

A computer-readable medium that comprises executable instructions for
providing a service in a controlled run-time environment, said executable
instructions comprising (see Abstract, lines 2-3; wherein code used to implement the
system in accessed via computer readable media):

code for registering a proxy service in said controlled run-time environment wherein said

proxy service implements an interface defined according to said controlled run-
time environment to enable services operating in said controlled run-time

environment (see paragraph [0700]; wherein the proxy is an EJD proxy)

configured to services operating in said controlled run-time environment to

interoperate with said proxy service (see paragraph [0768], lines 1-2; wherein the

controlled run-time environment is an EJB container);

coded for receiving service information by said proxy service from a local service

executing in said controlled run-time environment via an interface method of said proxy service (see paragraph [0908], lines 4-9);
code for communicating said service information to a remote service from said proxy service (see paragraph [0908], lines 4-9);
code for receiving processed information from said remote service in response to said communicating (see paragraph [0908], lines 4-9); and
code for returning said processed information to said local service from said proxy service (see paragraph [0908], lines 4-9).

Response to Arguments

8. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Johnese Johnson whose telephone number is 571-270-1097. The examiner can normally be reached on 4/5/9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain Alam can be reached on 571-272-3978. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
